2.c.(iv)	n/a
2.c.(v)	January 1 <sup>st</sup> , 2019
2.d.*	2023: \$145.0mm - 40%
2.e.	<b>EXCHANGE COSTS</b>  The Exchange operates regulated markets in energy, interest rate, equity and soft commodity futures and options. The production and dissemination of market data is an intrinsic part of the operation of fair and orderly markets and cannot be viewed as a standalone activity. Put differently, given the structure of electronic order

books and electronic order matching, it is not possible to provide execution services without generating market data, and it is not possible to generate pre-, and post-, trade data without also supplying a trade execution service.

The Exchange's business is supported by a largely unified cost base underpinned by activities and technology that contribute to ensuring the operation of fair and orderly markets (including the provision of market data).

Consequently, a holistic assessment of the Exchange's costs is relevant in this context.

## **FEE DETERMINATION**

The markets served by the Exchange are global and highly competitive. The Exchange faces competition in all aspects of its business from a number of different enterprises, both domestic and international, including traditional exchanges, electronic trading facilities and brokers.

The Exchange competes on the basis of a range of factors, including:

- transaction fees and market data fees;
- depth and liquidity of markets;
- price transparency;
- reliability and speed of trade execution and processing;
- technological capabilities and innovation;
- breadth of products and services;
- rate and quality of new product developments;
- quality of service;
- stability of services;
- distribution and ease of connectivity;
- mid- and back-office service offerings, including differentiated and value-added services; and
- reputation.

In order to maintain its competitive position, the Exchange must continue to develop new and innovative products and services, enhance its technology infrastructure, maintain liquidity and offer competitive costs (including both transaction and market data fees) to highly sophisticated customers which include financial institutions, asset managers, pension funds, commodity producers and refiners, utilities and governments, as well as industrial and manufacturing businesses that are increasingly engaging in hedging, trading and risk management strategies.

In the highly competitive environment in which it operates, the Exchange reviews overall trading costs including transaction and market data fees and liquidity on a regular basis taking into account inter alia its own fixed and incremental operating costs as well as value to customers and the range of competitive factors relevant to the Exchange's business.

AMSTERDAM ATLANTA BEDFORD CALGARY CHICAGO DUBAI DUBLIN HAYWARD HONG KONG HOUSTON JERSEY  
LONDON LUXEMBOURG NEW YORK PARIS ROME SANTA MONICA SINGAPORE SYDNEY TEL AVIV TOKYO WINNIPEG

	On this basis, the Exchange is of the view that its current pricing levels are appropriate and, as a subset of this, its market data fees fall well within what is considered a reasonable margin for high quality market data.
