

ESG Company Data

ESG Company Data provides granular data on companies that is collected and quality controlled by ICE, to offer continuously updated information on ESG risks and opportunities. The data covers a comprehensive set of datapoints, such as greenhouse gas (GHG) emissions, board profile and workforce diversity.

Alongside detailed ESG attributes and indicators, the service includes controversy data to provide a qualitative assessment related to a company's practices, based on international and local media, NGOs and research institutes. These data sets can help our customers make more informed decisions and meet regulatory compliance requirements.

With experience in researching corporate structures through our ICE Business Entity Service, our data is linked to individual fixed income and equity securities using ICE's corporate hierarchy data. This allows users to analyze data at the individual investment level.

Coverage

800+ data attributes and indicators

16,000+ entities*

1.4+ million fixed income securities and **33,000+ equity instruments**

Continuously updated data as it is disclosed by companies

Key features

Security linkage – With experience in researching corporate structures through our ICE Business Entity Service, our data is linked to individual fixed income and equity securities using ICE's corporate hierarchy entity data. This allows users to analyze data at the individual investment level.

Quality data collection – Data is sourced and quality controlled through our dedicated team of reference data specialists. We aim to provide extensive and continuously updated coverage of multiple data sources.

Regulatory data – To aid in compliance with SFDR, we offer the SFDR Principle Adverse Impact (PAI) solution.

Controversy data – To provide greater transparency into the reputational and ethical risks of public companies, controversial risk data is offered as part of our ESG Company Data service. This data set provides a qualitative assessment related to a company's practices, based on international and local media, NGOs and research institutes. By combining a controversy-based "outside-in" ESG data perspective with an "inside-out" approach of monitoring company disclosures, we believe ICE's ESG Company Data provides a comprehensive view to identify ESG risks that may be financially material.

* Includes direct entities and subsidiaries.

ESG data framework

Over 800 data attributes and indicators organized using the following framework:

Environmental

- Emissions reduction targets
- GHG emissions
- Renewable energy
- Toxic air emissions
- Waste
- Water efficiency

Social

- Benefits
- Diversity and inclusion
- Employee training
- Human capital
- Operational performance
- Product quality and safety

Governance

- Board profile
- Board skillset
- Business ethics
- Compensation
- Ownership and control
- Sustainable development goals

Key benefits

360° view of ESG risk –

Granular data coupled with an ESG assessment and risk data provides a 360-degree view of ESG factors.

Continuously updated data –

We continuously monitor and update company profiles throughout the year.

End-to-end market coverage –

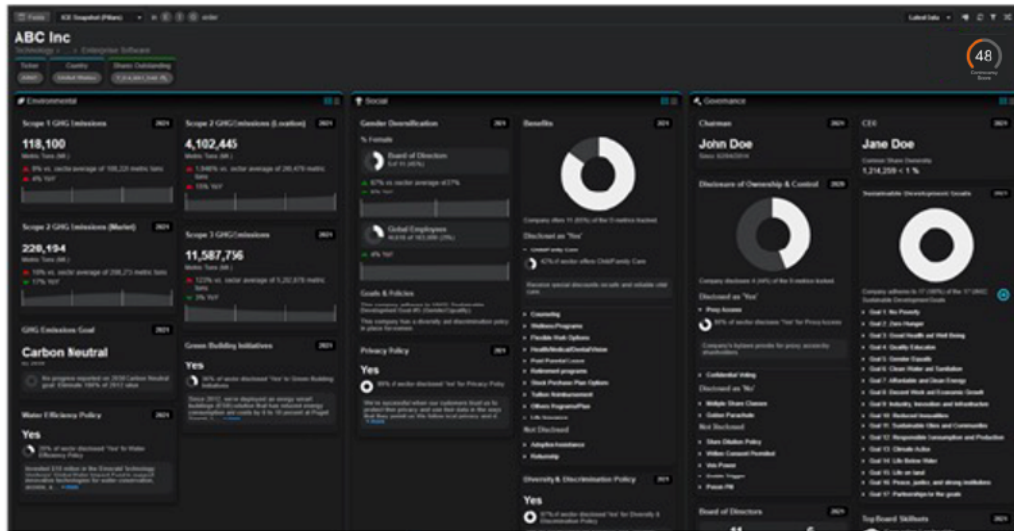

With coverage of both equity and fixed income securities, we can support your full portfolio needs.

Use cases

- **Portfolio management** – Identify securities for investment and ongoing management of a portfolio. Whether selecting based on client driven impact requirements, reducing risk, or generating excess returns, ICE's ESG Company Data provides the granularity to help ensure a thorough selection process.
- **Scoring** – A broad range of data points with history and broad entity coverage allows users to create scores based upon their own motivations and areas of focus.
- **Client reporting** – Metrics in client mandates can be aggregated and selected from the detailed data in our product.
- **Regulatory reporting** – The detailed requirements for reporting data to clients and regulators under SFDR and the EU Green Taxonomy have been applied to our ESG Company Data to aid your reporting.
- **Risk management** – Using both company reported data as well as external data allows users to conduct detailed risk assessments and to best manage risk from an ESG perspective.
- **Research** – Focus on ESG-related attributes that may correlate to financial performance as part of an investment strategy.

Delivery

Choose from a variety of delivery options including file based, or API to systematically deliver data into your investment processes. A sleek, user-friendly interface allows for easy search, comparison, and analysis.
