ISDA SIMM™ Crowdsourcing Facility

ICE Benchmark Administration (IBA) operates a polling mechanism for firms trading uncleared derivatives that provides consensus risk buckets as a key input to the ISDA SIMM™ methodology.

Crowdsourcing provides the answers regarding which risk bucket to select for each underlying ISIN traded across the equity and credit asset classes.

The crowdsourcing facility reduces margin call disputes by providing firms which use the ISDA SIMM™ methodology with an aligned set of risk buckets to use in daily CRIF files and SIMM calculations.

***Key Features of ISDA SIMM™ Crowdsourcing Facility:***

**Daily data files updates**
The polling mechanism and consensus calculation run daily. Results are published each business day and can be accessed via ICE website or MFT service.

**Reference data files**
As well as daily and historical risk bucket results IBA also publish reference files containing the ISDA risk bucket weightings, sectors and correlations.

**50,000 ISINs**
More than 50,000 ISINs included in the results across equity, credit qualifying and credit non-qualifying asset classes. The number of ISINs increasing as firms continue to join the facility.

**Wide participation**
Buy and Sell side firms trading uncleared derivatives from all phases of initial margin regulations. Firms can choose to submit votes or just use the daily consensus risk buckets in CRIF files and IM calculations.
