

## Accessing MFT (SFTP Server) After ICE Completes Setup

You can use any SFTP software, but Filezilla is used in this documentation

Browse to: <https://filezilla-project.org/download.php>

Download Filezilla Client

Install Filezilla

Run Filezilla

Load your private key (your private key) into Filezilla

- In Filezilla, select: Edit -> Settings -> Connection -> SFTP
- Select Add keyfile...
- Browse to the location where (your private key) is saved and select (your private key)
- Click Open
- The key will now be listed in the Public Key Authentication area of Filezilla

Next, setup the connection to (ICE's SFTP Server)

- In Filezilla, select File -> Site Manager
- Select New Site
- Name your site something descriptive (ie. ICE Trading MFT)
- Complete the settings:
  - Host: mft.trading.ice.com
  - Port 22
  - Protocol: SFTP - SSH File Transfer Protocol
  - Logon Type: Normal
  - User: <username>
  - Password: Do not write anything in password

Click Connect

This will save your connection so you can easily reconnect later. If your account is not configured at ICE yet, this will fail until the account is created.
