Test Markets at ICE

ICE offers test products that let you validate trading workflows without impacting your production environment. Test products run on a dedicated test trading engine and support real order submission and trade execution.

How Test Markets Work

Test products mirror live ICE markets but operate independently—they have separate market IDs and contract symbols, and their market hours align with their corresponding live products.

Key Characteristics:

- Test products and their live equivalents are completely separate entities
- Self-trading is permitted on test markets
- All testing activity is excluded from ICE regulatory reporting systems
- All testing activity is excluded from ICE's clearing systems
- Test symbols flow through FIX Trade Capture, ICE FIX Private Order feeds, and WebICE

Available Test Markets

ID	Market Type Name	Contract	iMpact Pricefeed – Multicast Group(s)	Exchange Silo

Getting Access

To trade on ICE test markets, you'll need two types of access:

User Permissions and Clearing Accounts

- Contact your firm's ICE User Administrator to request permissioning for test market types
- Clearing accounts with test market limits are required
- For questions about user administration, contact iceuseradministration@ice.com

Network Connectivity

- You'll need connectivity permissions for the test multicast groups

- If you connect through a service provider: contact your provider to request test multicast channels
- If you connect directly to ICE: contact ICE Global Network at iceglobalnetwork-info@theice.com
